have considered partial complex derivatives. Now we introduce the notion of a total derivative by the formula $dw/dz = \lim_{\zeta \rightarrow 0} \frac{w(z+\zeta) - w(z)}{\zeta}$; (28) and immediately realize that in a general case of a complex-valued function of z , our definition is quite pathological. Indeed, from Eq.

What is the best approach in passing a complex object between Pages in a Windows Store App? In the MSDN it states that only basic types of objects can be passed in order to serialize the session state, but I don't intend to serialize session state since my app will just log out and ask for log in credentials when the app is launched the next time.
