Each has a different weight, ascribed by the International System of Units (SI), where officially a tonne is called a Megagram or one million grams or one thousand kilograms. Which one is heavier depends on where you live.

Ton vs Tonne, what's the difference? Which one is heavier?

An aircraft is a vehicle or machine that is able to fly by gaining support from the air. It counters the force of gravity by using either static lift or by using the dynamic lift of an airfoil, or in a few cases the downward thrust from jet engines. Common examples of aircraft include airplanes, helicopters, airships (including blimps), gliders, paramotors, and hot air balloons.

Aircraft - Wikipedia

HEVC SDR up to 1080p, 30 fps, Main/Main 10 profile. H.264 video up to 1080p, 60 fps, High or Main Profile level 4.2 or lower. H.264 Baseline Profile level 3.0 or lower with AAC-LC audio up to 160 Kbps per channel, 48kHz, stereo audio in .m4v, .mp4, and .mov file formats

Apple TV HD - Technical Specifications - Apple

Thus, since the atomic mass of iron is 55.847 amu, one mole of iron atoms would weigh 55.847 grams. The same concept can be extended to ionic compounds and molecules. One formula unit of sodium chloride (NaCl) would weigh 58.44 amu (22.98977 amu for Na + 35.453 amu for Cl), so a mole of sodium chloride would weigh 58.44 grams.
